Summary:

A very dynamic software engineer who is in his second year with expertise in Git, Linux, and C programming.

I am dedicated to using test methods in order to make sure that the software is reliable.

For now, I am focusing on getting certified as a software engineer and as well blockchain developer.

Skills:

- Version Control: Git
- Operating Systems: Linux
- Programming Languages: C/C++, python, Go.
- Soft Skills: Problem-Solving, Team Collaboration, Communication.

Education:

- Diploma in Technology Civil Engineering
 - Technical University of Kenya(Expected Graduation: 2024)

Certifications:

- Currently Pursuing:
 - Software Engineering Certification - Alx (Holberton School)
 - Blockchain Bootcamp for Internet computer.
 - Data science certification course at Data camp

Experience:

- Internship (Software Engineering)| JP Morgan | Summer 2023
 - I was involved with implementing software solutions and observed how industry standards are applied,in a remote internship program offered by Forage.
- Attended numerous hackathon hosted nationwide in my Country among them;
 - The inaugural National research fund hackathon where my team were on 7th position nationally

Projects:

- Version control with Git
 - Guaranteed the integrity of code through use of git for version control.
- Linux System Programming
 - Coded programs using c language for linux operating system hence acquiring experience in system level programming.
- Redis programming
 - Recreated my own version of redis using Golang

Extracurricular Activities:

I am part of the charity Club (Rotaract) thus actively taking part in networking activities and events about professional development.

Goal:

Looking for opportunities to apply the skills in software testing through internships or starting positions. Eager to make my contribution in a team and continue learning and developing myself in the area of software engineering testing.
